Disclaimer: The pricing estimates displayed are monthly amounts and are based on your selected Cloud Services, configurations and dependent services. Monthly costs are billed on actual usage, prepayment is not required. Annual flex is a fixed commitment and is available from your Sales Representative. Your actual price at checkout may differ from this estimate. Complete pricing information [here](#).

To find out where a specific Oracle Cloud service is available refer to [Data Regions for Platform and Infrastructure Services](#)

The right to access, use, modify, reproduce, release, perform, display, disclose or dispose of information revealed or submitted herein is restricted in accordance with or subject to Oracle Legal Notices (available at <https://www.oracle.com/legal/privacy/>).

Common cloud industry practice is to define compute instances based on the number of virtual CPUs (vCPUs) they include. Each vCPU provides the capacity for one thread of execution. A vCPU does not provide a whole physical compute core, it's part of a core. In contrast, Oracle's x86 compute shapes use OCPUs which equate to physical CPU cores, each of which provides for two threads.

Total monthly cost for a product with tier pricing is calculated based on aggregated quantity for given product across entire user estimate.
